## PAVING & SEALING

### Asphalt Overlay 2"

#### Steps:

- Clean and remove all debris and vegetation from area to be resurfaced and remove all existing speed bumps.
- When necessary, cut a heel when the asphalt overlay adjoins existing pavement or concrete entrance ramps.
- Apply a tack coat
- Areas requiring a leveling course will be leveled prior to or during the asphalt overlay
- Surface course will be uniformly placed at an average 2" compacted depth and properly compacted to achieve a smooth and uniform surface
- Asphalt overlay will be tapered along gutter pan and a tack coat applied to help prevent moisture intrusion.
- Hauling over freshly placed asphalt shall not be permitted.
- Drainage will not be guaranteed on paved areas having less than 2% grade.

NOTE: Owner will be responsible for clearing construction area during operation. Area can be re-opened when paving operations are completed.
